I am using mysql to get datas from the db. I have an ip address and I want to get all the datas who has the same ips. here is my query `SELECT ip, sum(`Access`) AS `Access` FROM `Account` WHERE `ip` REGEXP '^[0-9]{1,3}|1[0-9]{2}|2[0-4][0-9]|25[0-5])'` GROUP BY `ip`; For example I have the results 1.1.1.1 0 2.2.2.2 1 3.3.3.3 0 4.4.4.4 1 4.4.4.4 1 I want to get all results but I can only get one result for the same ip (4.4.4.4). How can I get all the datas? A: If you do a query that shows you how many records there are per ip, you can just subtract that from the number of records you expect the query to return in total. `SELECT ip, sum(`Access`) AS `Access` FROM`

``Account` WHERE `ip` REGEXP '^[0-9]{1,3}|1[0-9]{2}|2 f678ea9f9e`
